DETAILED ACTION

Drawings

1. The drawings are objected to because the font sizes for the descriptive text labels of figure 2 are too small to see clearly when printed. Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

2. Figure 6 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). Corrected drawings in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid

Art Unit: 2611

abandonment of the application. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Specification

3. The disclosure is objected to because of the following informalities:

The Application No. "6,319,671" disclosed in paragraph [0002] is suggested to changed to – 60/319,671 --.

In paragraph [0033], line 2, "in known" is suggested to change to – is known --.

Figures 10 and 11 are not listed under the heading BRIEF DESCRIPTION OF DRAWINGS.

Appropriate correction is required.

Claim Objections

4. Claims 3 and 8 are objected to because of the following informalities:

The recitation of "1further" recited in claims 3, line 1 and 8, line 1 is suggested to change to – 1 further --.

Appropriate correction is required.

Claim Rejections - 35 USC § 112

5. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

6. Claims 6-10 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The recitation of claim 6 is vague and indefinite because the steps "obtaining ... subcarriers" (lines 4-5), "determining ... subcarriers" (lines 6-7), and "finding ... subcarriers" (lines 8-9) are not related to each other or any other steps in the claim. That is, they do not provide any useful purpose for the claim since each of the mentioned steps is not used by any other step.

Allowable Subject Matter

7. Claims 1-5 are allowed over prior art of record.
8. Claims 6-10 would be allowable if rewritten or amended to overcome the rejection(s) under 35 U.S.C. 112, 2nd paragraph, set forth in this Office action.

Conclusion

9. References Weinstein et al (US 5,539,832), Kang et al (US 5,914,931), Raleigh (US 6,219,561) and Shekter (US 2002/0034337) are cited because they are pertinent to the apparatus and method for noise reduction for the multicarrier communication

Art Unit: 2611

system. However, none of the cited references teaches or suggests, a method for improving the signal to noise ratio in a multicarrier communication system comprising, in combination, the arrangements of the method steps of receiving a plurality of frequency domain data signals; accumulating the plurality of signal data on a predetermined number of useful subcarriers; averaging the accumulated signal data; and, especially, substituting the averaged accumulated data for the received frequency domain data signals to improve the signal to noise ratio as recited in claim 1 or some of the variations of method steps of claim 6 and further limitations of their respective dependent claims 2-5 and 7-10.
